# Molded Products

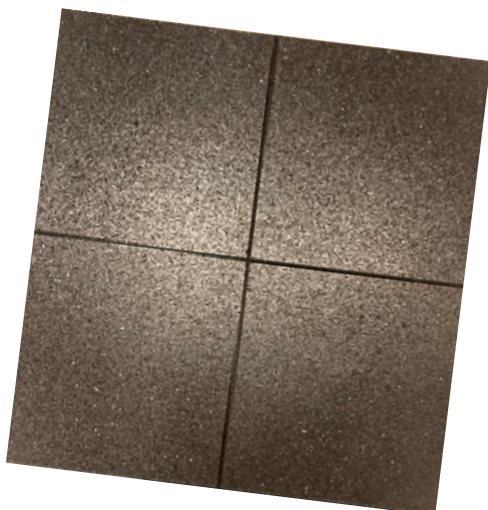

## Swedish-made, recycled, and produced locally

EcoRub manufactures molded products in its factory in Lövånger. The equipment we use in our production facility is state-of-the-art equipment brought in from Italy that manufactures products of the highest quality and flexibility. This means that we can fabricate the majority of products across several different industries:

- Sports products
- Outdoor products
- Mining industry
- Marine
- Telecommunications
- Agricultural products
- Safety flooring
- Automotive industry
- Logistics

EcoRub works with recycled rubber to manufacture products containing circular materials. Our Kundcirkularitet® (customer circularity) concept enables waste rubber generated by companies locally in the Nordic region to be turned into new products.

## Sports products

## Agricultural products

## Outdoor products

- Garden plates
- Flower boxes

## Safety flooring

- Specially adapted safety flooring for playgrounds
- Safety flooring for climbing walls
- Available in a number of different colours and shapes to create a stimulating environment for children and adults

## Mining industry
